

```

1  -- CODING CONVENTIONS:
2  -- Leading__upper_case : class
3  -- i. : instance var
4  -- l. s : reference to a library function
5  -- prefix _ : some internal function,variable.
6
7  -- type hints: where practical, on function arguments,
8
9  -- t = table
10 -- prefix s=string
11 -- prefix n=num
12 -- prefix is=boolean
13 -- class names in lower case denote vars of that class
14 -- suffix k denotes table of things
15 -- l = require"lib"
16 local l = l.settings[[
17
18 RL.LUA : stings
19 (c)2022 Tim Menzies <tim@ieee.org> BSD(2clause).
20
21 USAGE:
22 lua rlgo.lua [ -bFghksS [ARG] ]
23
24 OPTIONS:
25 -b --bins discretization control = 8
26 -F --Far in "far", how far to seek = .95
27 -g --go start-up action = pass
28 -h --help show help = false
29 -k --keep keep only these nums = 256
30 -p --p distance coefficient = 2
31 -s --seed random number see = 10019
32 -S --Some in "far", how many to search = 512]]
33 local RL = {About={}, Data={}, Row={}, Col={}, the=the}
34 local About = RL.About -- factory for making columns
35 local Data = RL.Data -- store rows, and their column summaries
36 local Row = RL.Row -- stores one row
37 local Col = RL.Col -- summarize 1 column. Has 2 roles-- NOMinal,RATIO for symms,nums
38
39 -- FYI: I considered splitting Col into two (one for
40 -- NOMinals and one for RATIOs). But as shown in Col (below),
41 -- one of those two cases can usually be handled as a
42 -- one-liner. So the benefits of that reorg is not large.
43
44 -- One nuance here is that, to save memory, Rows are created by the FIRST Data
45 -- that sees a record, then shared across every other clone of the data
46 -- (e.g. when clustering, the super Data points to the same Row as the sub-Data
47 -- cluster of all the other rows closest to that first Row).
48 -- Since rows maintains a pointer to its creator Data object,
49 -- that first data Data can be used to store information about the entire
50 -- data spaces (e.g. the max and min possible values for each columns).
51 -- This makes certain functions easier like, say, distance).
